2183

SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	01/24/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/796,499

Applicant(s)

ESPOSITO, BEN

Examiner

Idriss N. Alrobaye

Art Unit

2183

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 March 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 13 July 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications through the applicant's application filed on 03/08/2004.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
3. In page 9 of the specification, please insert a valid serial number for the listed application, or if the application has resulted in a patent, list the patent number.

Claim Objections

4. Claims 8, 12 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 8 and 12 fail to further add a structure or a further limitation to the claim that it depends from.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2183

6. Claims 2 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 2 and 6, the use of "the same channel" is vague and unclear. It's unclear of what channel is the claim referring to. It's also vague on whether it is referring to each column having a separate channel or same channel for all columns. Therefore, the use of "the same channel" is indefinite and is interpreted by the examiner as broadly as reasonably possible.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Peng U.S. Patent No. 5,594,675 (hereinafter Peng).

9. As per claim 1, Peng teaches digital signal processing (DSP) circuitry that independently processes a plurality of multi-channel data signals, comprising:

a plurality of columns of registers (see e.g. Fig. 11, elements 734-0, 734-1, 734-u-1 etc), each said column comprising a plurality of registers arranged in serial (see e.g.

Fig. 11, element 734-1, wherein column 734-1 has plurality of registers and are arranged in series); and

interconnection circuitry for allowing successive channels of said plurality of multi-channel data signals to be selectively shifted through said plurality of registers each said column (see e.g. Fig. 11, element 734-1, and col. 17, lines 5-23) and to also be selectively shifted through a plurality of registers in at least one other of said plurality of columns (see e.g. Fig. 11, element 734-0 (one column), element 734-1 (another column), wherein one input of MUX1 (element 732-1) comes from column 734-0).

10. As per claim 2, Peng teaches the circuitry of claim 1, further comprising utilization circuitry for operating on data output by each said column (see e.g. Fig. 11, element 740-0, 740-1, etc), wherein the data signal output by each said column corresponds to the same channel (see e.g. Fig. 11, element 734-0, the output signal that is coming out of REG 1 and into the multiplier 740-0; see also Fig. 5).

11. As per claim 3, Peng teaches the circuitry of claim 2, wherein said utilization circuitry comprises circuitry selected from the group consisting of adder circuitries, multiplier circuitries, and a combination thereof (see e.g. Fig. 11, elements 740-0, 740-1, multiplier).

12. As per claim 4, Peng teaches the invention as claimed above. Peng further teaches the circuitry of claim 1, wherein the interconnection circuitry comprises: a

Art Unit: 2183

multiplexer circuit associated with each register in each said column (see Peng, e.g. Fig. 5, wherein a multiplexer is associated with each register in each column; see column that contains element 413-1, 412-0-1, 412-0-L; register 412-0-1 is associated with MUX 413-1 and 412-0-L is associated with MUX in $i=2$).

13. As per claim 5, Peng teaches the invention as claimed above. Peng further teaches the circuitry of claim 1, wherein said interconnection circuitry allows successive data signals to be shifted to as many different said plurality of columns as needed such that the output of each of those columns is used as an input to a finite impulse response filter function (see e.g. Fig. 11; abstract; col. 1, lines 1-67; col. 6, lines 65-67; col. 16, lines 5-20).

14. As per claim 6, Peng teaches the invention as claimed above. Peng further teaches the circuitry of claim 5, wherein the output of each of those columns corresponds to the same channel (see e.g. Fig. 11 and Fig. 5).

15. As per claim 7, Peng teaches the invention as claimed above. Peng further teaches the circuitry of claim 1, wherein said interconnection circuitry can selectively route data signals past one or more of said registers in each said column (see e.g. Fig. 11, wherein the output of column 734-1, REG 1 is going to the input of MUX1 (element 732-1)).

Art Unit: 2183

16. As per claim 8, Peng teaches the invention as claimed above. Peng further teaches a programmable logic device including circuitry as defined in claim 1 (A digital signal processing as taught by Peng is a programmable logic device).

17. As per claim 9, Peng teaches the invention as claimed above. Peng further teaches the programmable logic device defined in claim 8 further comprising:

routing circuitry for selectively supplying signals to and receiving signals from the DSP circuitry (see e.g. Figs. 10-11).

18. As per claim 10, Peng teaches the invention as claimed above. Peng further teaches the programmable logic device defined in claim 9 further comprising:

programmable logic circuitry connected to the routing circuitry (see e.g. Fig. 4, wherein element 310 is connected to element 340 (which contain the routing circuitry)).

19. As per claim 11, Peng teaches the invention as claimed above. Peng further teaches a digital processing system comprising:

processing circuitry (see e.g. Fig. 4);

a memory coupled to the processing circuitry (see e.g. Fig. 4, elements 310 and 320); and

a programmable logic device as defined in claim 8 coupled to the processing circuitry and the memory (see e.g. Fig. 4, element 340).

20. As per claim 12, Peng teaches the invention as claimed above. Peng further teaches a printed circuit board on which is mounted a programmable logic device as defined in claim 8 (it's understood from the Peng reference that the DSP is mounted on a printed circuit board).

21. As per claim 13, Peng teaches the invention as claimed above. Peng further teaches the printed circuit board defined in claim 12 further comprising:

a memory (see e.g. Fig. 4, element 320 and 310) mounted on the printed circuit board and coupled to the programmable logic device (see e.g. Fig. 4, element 340; It's understood from Peng reference that the circuit is mounted on a printed circuit board).

22. As per claim 14, Peng teaches the invention as claimed above. Peng further teaches the printed circuit board defined in claim 12 further comprising:

processing circuitry mounted on the printed circuit board and coupled to the programmable logic device (see e.g. Fig. 4, wherein elements 330 and 350 are processing circuitry and are connected to the control logic 340).

23. Claim 15 is rejected under 35 U.S.C. 102(b) as being anticipated by Washakowski et al. U.S. Patent Application Publication No. 2005/0238117 (hereinafter Washakowski).

Art Unit: 2183

24. As per claim 15, Washakowski teaches a programmable logic device (PLD), comprising:

digital signal processing (DSP) circuitry that supports multiple channels of data being transmitted on the same carrier, said DSP circuitry (see e.g. Fig. 1, wherein I and Q are the channels) comprising:

tap delay line circuitry (see e.g. Fig. 2A-2D, wherein element 200I and 200Q are the tap delay line circuitry; see paragraphs [0023]-[0024]) that registers the data of each of the multiple channels such that the data of each channel is not mixed with the data of any other channel (see e.g. Fig. 2A-2D; and Fig. 4C, where it two shows the two separate channels I and Q, elements 440I and 440Q); and

utilization circuitry that performs a function on data received from said tap delay line circuitry (see e.g. Fig. 2A-2D, wherein the adder, element 206I and 206Q are the utilization circuitry).

Claim Rejections - 35 USC § 103

25. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

26. Claims 16-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Washakowski in view of Peng.

27. As per claim 16, Washakowski teaches the invention as claimed above.

Washakowski further teaches the PLD of claim 15, wherein said tap delay line circuitry comprises:

at least two columns of registers, each column including at least two registers arranged in serial (see Washakowski, Fig. 4C);

Washakowski did not specifically teach the structure as described below (a multiplexer circuit respectively associated with a register of each said column, said multiplexer....).

Peng teaches the structure as described here: a multiplexer circuit respectively associated with a register of each said column (see Peng, Fig. 11, multiplexers (732-0 to 732-u); columns (elements 735-0 to 735-u); registers in each column (734-0 to 735-u), said multiplexer circuit operative to select one of at least two input signals being applied to said multiplexer circuit for application to said associated register (Fig. 11, column 735-0), one of said input signals being one of said plurality of multi-channel signals, and another one of said input signals being the output signal of a register that is conveyed by a tap delay line from a register in a column different than the column said multiplexer circuit applies said input signal to (Fig. 11, columns, elements 735-0 and 735-1). Peng teaches the structure as described above for the purpose of reducing processing requirements (Peng, col. 19, lines 61-67):

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teachings of Peng in the invention of Washakowski, for the purpose of improving FIR filters by merging cross-symmetric bank

Art Unit: 2183

filter terms. The merging of the filter banks enables a dramatic reduction in processing time and circuit size requirements without impeding the performance of the filter (Peng, col. 6, lines 40-44; col. 19, lines 61-67).

28. As per claim 17, Washakowski in view of Peng teaches the invention as claimed above. Peng further teaches the DSP circuitry of claim 16, wherein said associated register is a leading register in each said column (see Peng, Fig. 11, columns 735-0 to 735-u and REG L in each column). The motivation utilized in the combination of claim 16, super, applies equally as well to claim 17.

29. As per claim 18, Washakowski in view of Peng teaches the invention as claimed above. Peng further teaches the DSP circuitry of claim 16, wherein the output signal of the register being conveyed by the tap delay line is the output of a trailing register in each said column (see Peng, Fig. 11, columns 735-0 to 735-u and REG 1 in each column). The motivation utilized in the combination of claim 16, super, applies equally as well to claim 18.

30. As per claim 19, Washakowski in view of Peng teaches the invention as claimed above. Peng further teaches the DSP circuitry of claim 16, wherein the tap delay line conveys an output signal of a register that is being provided to a first tap to a multiplexer circuit associated with a column that provides an output signal to a second tap (see

Art Unit: 2183

Peng, Fig. 11, columns 735-0 to 735-1). The motivation utilized in the combination of claim 16, super, applies equally as well to claim 19.

31. As per claim 20, Washakowski in view of Peng teaches the invention as claimed above. Peng further teaches the DSP circuitry of claim 15, wherein said utilization circuitry selectively operates on signals output by a register in each said column. (See Peng, e.g. Fig. 11, multipliers 740-0 to 740-u). The motivation utilized in the combination of claim 16, super, applies equally as well to claim 20.

32. As per claim 21, Washakowski in view of Peng teaches the invention as claimed above. Peng further teaches the DSP circuitry of claim 16, further comprising bypass circuitry for enabling the selected input signal to be routed directly to one of said at least two registers in said column of registers (see Peng, e.g. Fig. 11, column 735-0, wherein the output of REG 1 is feedback to the MUX1 and to REG L). The motivation utilized in the combination of claim 16, super, applies equally as well to claim 21.

Conclusion

33. The following is text cited from 37 CFR 1.111 U.S. Patent No.: In amending reply to a rejection of claims in an application or patent under reexamination, the applicant or patent owner must clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the

objections made. The applicant or patent owner must also show how the amendments avoid such references or objections.

34. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- U.S. Patent No. 5,144,525 shows analog acquisition system including a high-speed timing generator.
- U.S. Patent No. 6,421,251 shows an array board interconnect system
- U.S. Patent Application Publication No. 2002/0130944 shows a light-emission modulation having effective scheme of creating Gray scale on image
- U.S. Patent Application Publication No. 2002/0089348 shows programmable logic integrated circuit devices including dedicated processor components.
- See also attached PTO-892 form.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Idriss N. Alrobaye whose telephone number is 571-270-1023. The examiner can normally be reached on Mon-Fri from 8:00 to 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Chan can be reached on 571-272-4162. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
